TimejayHX timeshifting

TimejayHX is a powerful time-delay application designed to provide reliable H24 audio/video timeshifting with Blackmagic, Deltacast, Stream Labs cards, or IP input/output. With TimejayHX time-delay videosever, building up new "+1" channels on DVB-T, satellite or web is as easy as never before. And you save on purchase of additional playout automation systems...

- 1** *Our clean and user-friendly design greatly speeds up your learning curve, minimizing support requests and operating mistakes.*
- 2** *Thanks to the plug-in structure, you may purchase only the specific features required., saving valuable money.*

- 3** *The TimejayHX multilanguage interface allows to quickly edit all the captions to your requirements or add a new language.*
- 4** *TimejayHX is "Windows8 ready", up to date to guarantee excellent performance on the newest hardware/software configurations.*

IN/OUT STREAMING OPTION

TimejayHX fully supports capturing from streaming feeds, and can be configured for realtime streaming of captured media at the same time. TimejayHX can be easily interfaced with any 3rd party streaming platform thanks to the virtual device output.

THE COMPANY

From 1997, Winjay is a leading developer of radio and TV broadcast automation products, ranging from radio/TV playout automation to commercial splitting, media asset management, audio / video logging systems. Offering good value for money, professional after-sale tech support, careful engineering and continuous innovation are key attributes to a successful product. Our customers know they can trust on us: for our company, this is the best form of advertising.

DELAY AS YOU REQUIRE

TimejayHX can be set to delay from few minutes to several hours, depending on your exact channel requirements. All the single channels can be individually set each to a different delay time.

CONSISTENT AUDIO OUTPUT

The integrated audio processor delivers constant on-the-fly levelling of audio output, thus avoiding nasty volume changes between different contents, for example between movies and advertising.

CUSTOMIZE YOUR LICENCE

TimejayHX is engineered on a multichannel building block structure, allowing from 1 up to 8 channels on the same recording server. Some features are kept as options, allowing to save money on initial purchase, and add more later.

BUILT-IN CG

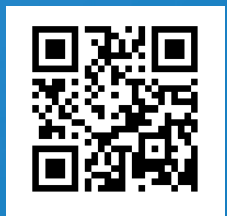

TimejayHX includes a comprehensive logo inserter, offering static pictures and animated Flash video overlays, so you save money on purchase of dedicated logo generators. The CG (Character Generator) is available as option, offering multiple layers of graphics and complex animation projects.

EASY TO INTERFACE

TimejayHX can be easily configured with A/V in/outs in composite, S-video, component, SDI, and will also operate as format translator. For example the input can be SDI HD and output in component SD. IP-based input/output is also available in a choice of transport and video formats.
